

Project README

Project Overview:

This Excel dashboard simulates a full-year B2B sales dataset for a consumer electronics company. It covers 240 monthly transactions across 4 regions, 5 products, and 8 sales representatives. Built to demonstrate Excel skills: VLOOKUP, INDEX-MATCH, SUMIF, pivot-style analysis, conditional formatting, and charts.

Sheets Explained:

1. Raw Data — Source transaction data with 240 rows. Filters and conditional formatting applied.
2. Charts — 4 charts: Bar Chart(Revenue by Region), Pie Chart(Product Share), Horizontal Bar Chart(Units Sold), Clustered Column Chart(Monthly Trend vs Target).
3. Dashboard — Executive summary with Regional performance breakdown, regional table, product table.
4. Pivot Analysis — Summary tables built with SUMIF/AVERAGEIF formulas (no Excel Pivot Tables).

Key Formulas Used:

- SUMIF : Aggregate revenue/units by region, product, or month
- AVERAGEIF : Average discount per region
- VLOOKUP : Product lookup by name (see Pivot Analysis sheet)
- INDEX-MATCH : More flexible lookup (see Pivot Analysis sheet)
- RANK : Ranks products by revenue
- SUM/AVERAGE : Totals and averages across data ranges

Conditional Formatting Rules:

1. Raw Data > Achieved %: Green if $\geq 100\%$, Red if $< 80\%$
2. Raw Data > Revenue: Blue data bar (visual distribution)

Skills Demonstrated:

- ✓ Data modelling — structured raw data with relationships across columns.
- ✓ Formula-driven analysis — no hardcoded Python values; all Excel formulas.
- ✓ VLOOKUP vs INDEX-MATCH — side-by-side comparison with explanation.
- ✓ Conditional Formatting — multiple rule types.
- ✓ Charts — 4 chart types with custom formatting.
- ✓ Dashboard design — colour-coded tables, executive summary.
